

SOLUTIONS OVERVIEW ■ NETWORK MONITORING

WE ARE BCN

A single source provider helping business clients find simplicity in complex multi-location, multi-network telecom deployments based on the portfolios of 75+ wholesale network partners.

SINGLE PROVIDER

A single-source for custom-configured solutions.

UNIFIED BILLING

All services at all locations on one monthly invoice.

CUSTOMER CARE

Single point of contact for 24/7/365 U.S.-based support.

OUR LEGACY

25 years of experience and thousands of business clients.

Today's complex information networks require a variety of devices to attain peak performance. Uptime and availability of those devices is critical as is the continual availability of optimal network bandwidth.

A BCN monitoring solution supports a wide variety of sensor types and includes uptime/downtime and usage monitoring as intense usage of network bandwidth can often be the reason for unavailability or system errors.

BCN Managed Equipment and Network Monitoring services checks the availability of your equipment and other network devices such as routers, switches, servers and more - notifying the system administrator immediately when outages occur. While our NOC monitors your circuits 24/7/365, you also have access to a web-based dashboard to view current circuit status.

In the case of an outage, our team will contact the provider, open a ticket, use best efforts to speed resolution, and communicate with appropriate parties' progress updates and ticket closure. Many times the BCN team is actively working toward resolution before our customer is even aware there is an issue. BCN's U. S.-based 24/7/365 support means that monitoring and issue resolution are always at work.

What's more, BCN offers customers the added convenience of monitoring all the equipment and circuits in the network, even those devices not included in the BCN solution. For non BCN-sourced equipment and circuits customers receive notifications and alerts in the same timely manner and are able to address any issues directly with the service provider. Detailed reports are created to document overall system uptime and include all monitored activity inside the customer network.

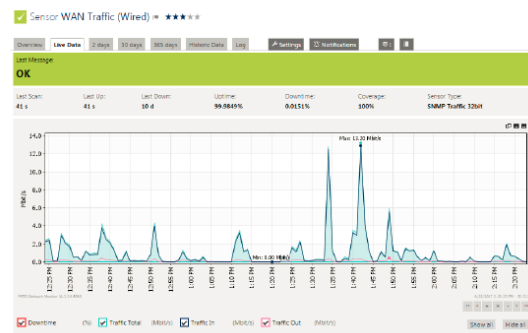

INSIDE THE BCN NETWORK MONITORING TOOL

Main Screen with list of all locations:

All customer locations along with Router Name and Circuit ID allows a quick view to sensor status.

Bandwidth Utilization Sensor:

Sensor plots out the circuit utilization over time. BCN Customers can view up to 90 days of historical data.

PING Sensor:

PING Sensor sends packets every 60 seconds to router and plots out several metrics like downtime, ping time (latency), and packet loss. BCN stores up to 90 days of data that can be viewed in a clear, intuitive portal.

Alert Logs:

Alerts are sent via email after circuit is unresponsive for more than 5 minutes. A clear log of alert activity can be viewed in the portal as well.

BCN Network Monitoring solutions are provided at no cost for BCN-sourced equipment and circuits and for a nominal monthly recurring charge for those outside the BCN solution.
